

Information Visualization Tutorial WS 2009/2010
Dominikus Baur

V: 14.12.2009 - 18.12.2009

Task 1 - Literature

Read Aigner et al.: "*Visualizing time-oriented data - A systematic view*" (Computers & Graphics 31, 2007) (<http://vcg.informatik.uni-rostock.de/~schumann/papers/2006+/CGTimeVizFinal.pdf>)

We will discuss the paper in the next session.

Task 2 - Refine your project

- a) **Create a new wiki-page for your project on the InfoVisLifeTracking page (see above) under the section "Semester projects". Use the "IV" prefix for its name. Write an abstract with a maximum of 300 words for your project. Upload it as soon as possible to allow for discussion in the wiki. If you're not sure how to write a good abstract, read this essay:** <http://www.ece.cmu.edu/~koopman/essays/abstract.html>
- b) **Have a look at the other abstracts and comment on them on their respective project pages.**
- c) **Look for literature related to your project. Find at least 3 scientific and relevant papers. Link to them on your wiki-page.**
- d) **Refine your project accordingly to produce something new. Be specific. Present it in the next session.**
