Representing complex relationships, new behaviours and attitudes are an integral part of interaction design.

These can be represented through many means including sketching and making physical prototypes.

However, capturing a journey over time requires a linear medium like video.
Why Prototype?

Prototypes help to validate the value of new ideas and test initial assumptions. Prototypes can also help to convince others and yourself.

Benefits:
Low resource and time investment
Faster feedback and a participatory approach
Early Validation in the development life-cycle
"Just Enough Prototyping"

Understand your audience and choose the right level of resolution and fidelity.

Judge the time and resources available.

Go for the easiest and simplest track, don’t overdo you prototype for a given context.
Low Fidelity

- Open Discussion
- Prompting Required
- Quick and Dirty
- Early Validation

High Fidelity

- Sharp Opinions
- Self Explanatory
- Deliberate and Refined
- Concrete Ideas
Low Resolution

- Less Details
- Focus on core interactions
- Quick and Dirty
- Early Validation

High Resolution

- More Details
- Focus on the whole
- Deliberate and Refined
- Concrete Ideas
Inspiration from camera shots and film making

**Extreme long shot (wide shot)**
A view showing details of the setting, location, etc.

**Long shot**
Showing the full height of a person.

**Medium shot**
Shows a person’s head and shoulders.

**Over-the-shoulder shot**
Looking over the shoulder of a person.

**Point of view shot (POV)**
Seeing everything that a person sees themselves.

**Close-up**
such as showing details of a user interface a device the person is holding.
Choosing the right camera

Image Source: CIID
Choosing The Right Camera

A “3 CCD” camera which uses a separate chip for red, blue, and green, giving a more “true to life” look to the video.

HD (high definition) camera’s have a much higher video quality than both one chip and three chip SD (standard definition camera’s)
CCD chip in a camera

Plan

What’s the video about (in one sentence)?
Who’s the audience? (YouTube vs. Client)
What are we going to see? (Scenario)
What about audio? (Audio can make or break it)
Editing Basics:
Montage vs. Continuity
Example: Continuity
Nike Commercial
Continuity:
- a logical coherence between shots
- the viewer shouldn’t “feel” the cut
- the focus is on the story
Example: Montage

Alfred Hitchcock
Montage:
-new assembly of material to create new meanings
-artistic approach
-the viewer “feels” the effect
Combining Images and Sound through Editing
Example : Star Guitar
Michel Gondry
material was produced and edited to match the audio layout of the compete “sound scape” objects (oranges) were used to represent “events”
Editing Rules:

Cut on the beat to match the audio.

Be ruthless about the cut’s: judge shots critical to filter out the unimportant material.

Rule of thumb: one minute action can be described in max 10 sec
From the Task Analysis to Video Shoot:
Making Tea!
Goal: Make cup of tea

Sub-Goals:
- Heat water
  - Fill kettle
  - Boil kettle
- Infuse tea
  - Place tea bag in cup
  - Add hot water
- Add milk/sugar/lemon
  - Add milk
  - Add sugar
  - Add lemon

Artifacts:
- water, kettle
- tea bag, cup, hot water
- milk, sugar, lemon, spoon

</tbody>
</table>
Video-format and Duration

The video you submit should have the following format:
- MPEG-4, max 3min.
- resolution 640 x 480, codec: AAC, H.264
- be sure that the video is self-explanatory
- explain necessary background information in the beginning of the video
- consider that font sizes should be big enough and readable when your video is being presented
Free Music:

or
Album “Royalty Free” on iTunes
Next Steps Till Thursday

- individual group-work: shot and edit
- materials you need: laptop & camera (video & photo)
- feedback and reviews on demand

Gather back here: 9h (c.t.)
