Abschlussvortrag Projektarbeit

# Extending Sourcebinder for prototyping physical interfaces

Betreuerin:

Verantw. Hochschullehrer:

Bettina Conradi

Prof. Dr. Heinrich Hußmann

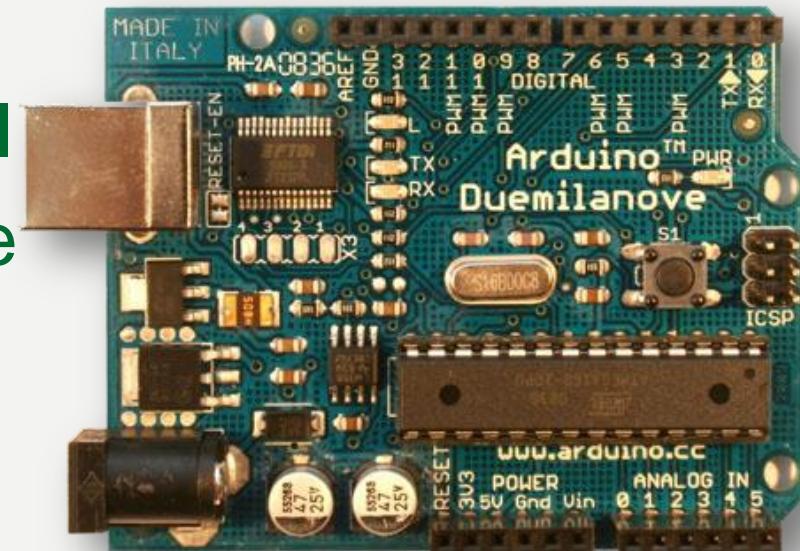

# Motivation

Miriam Kranz  
kranzm@cip.ifi.lmu.de

- **Prototyping** is key element in innovation
- Until recently developing physical interface (PI)-prototypes required engineering skills
- **Hardware and software toolkits** developed allowing people that not engineers to prototype PI
- **SourceBinder** [1] can be used to prototype Pis

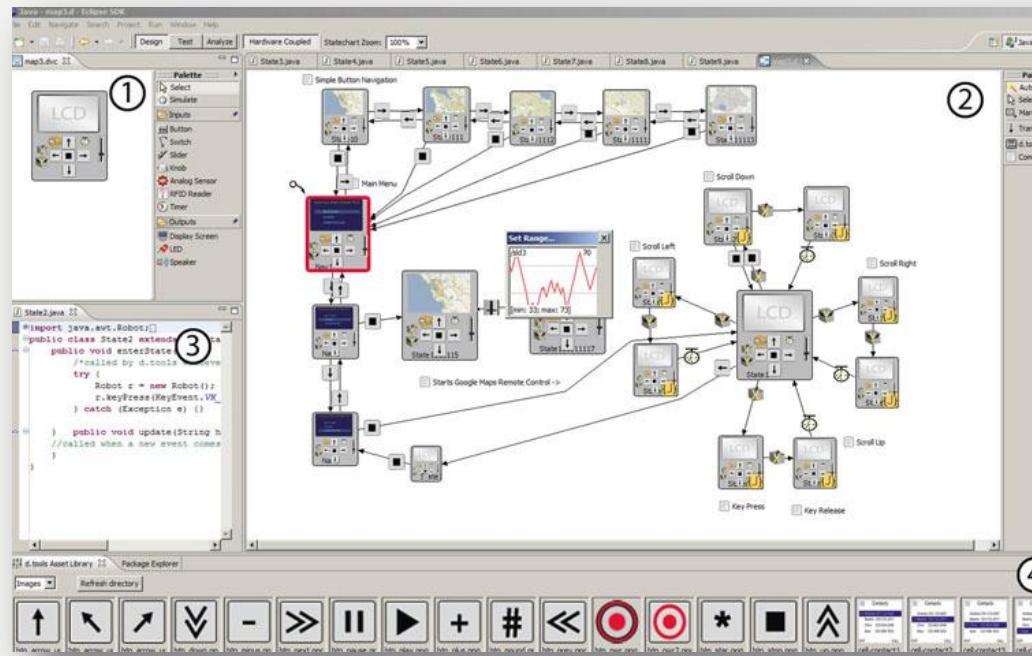

[2]

# Related Work

kranzm@cip.ifi.lmu.de

- D.tools [3]:
  - Iterative design-centered approach to prototype PUIs and information appliances
  - Visual programming through statecharts

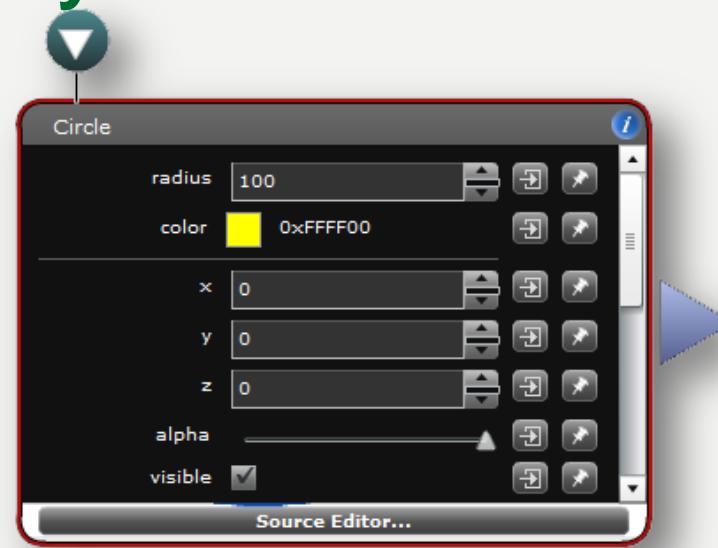

- More related works:
  - ESPranto [4], Exemplar [5], Papier-Mâché [6], i-Stuff Mobile [7], ...

# Sourcebinder

Miriam Kranz  
kranzm@cip.ifi.lmu.de

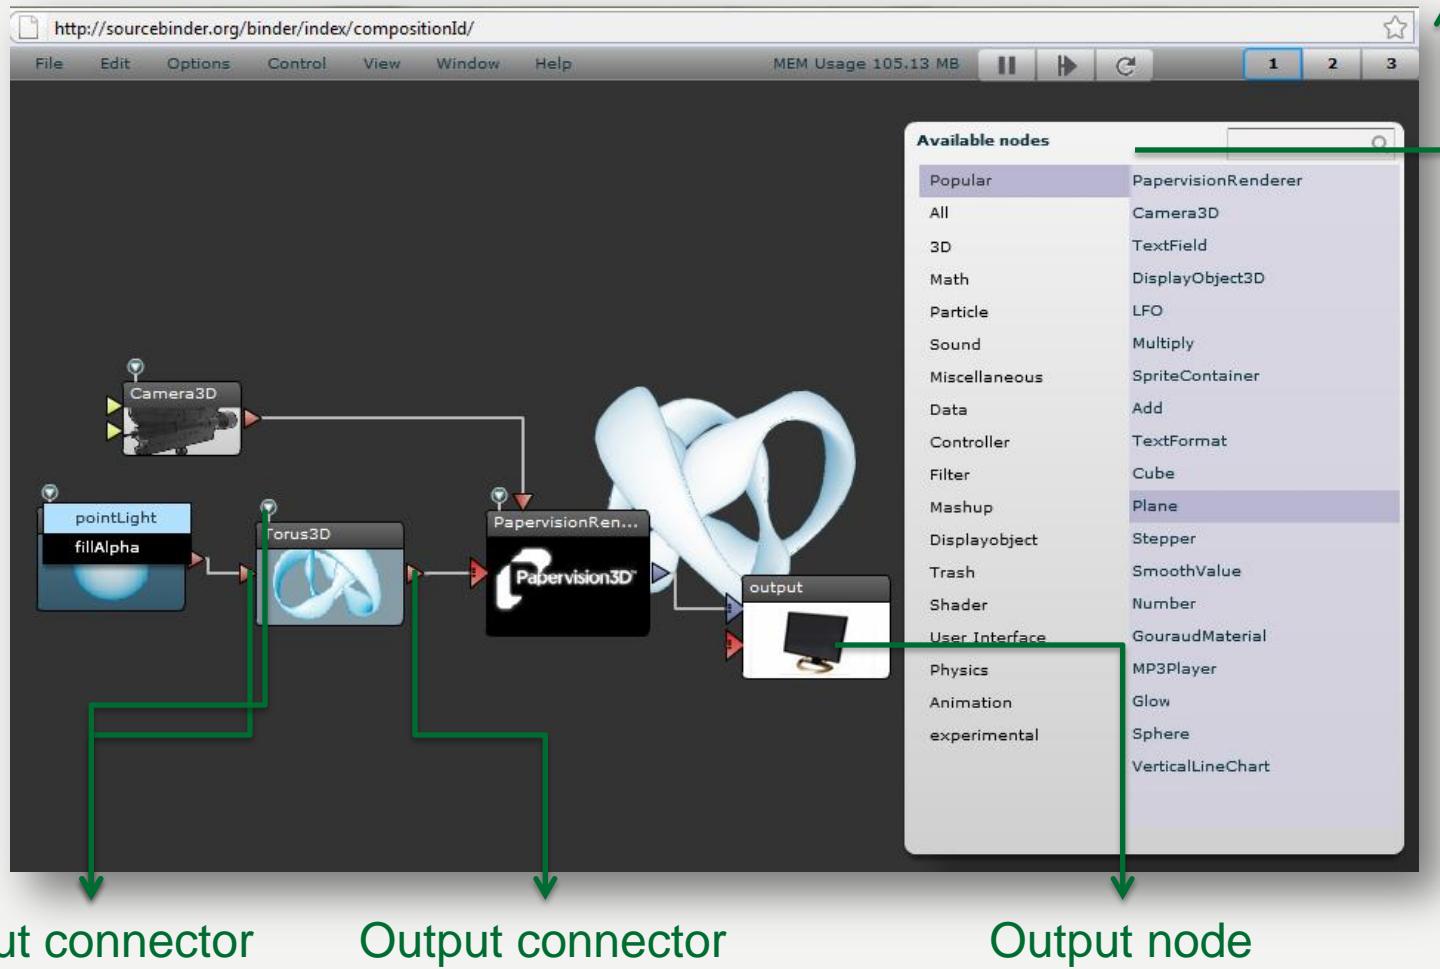

- Rapidly expanding, **community-based** development environment
- AS classes and code snippets can be inserted by anyone and become **nodes**
- Arduino-nodes allow connection to Arduino
- Nodes are visually connected together and build custom Flash applications that can be saved as **compositions**

- Sourcebinder Interface:

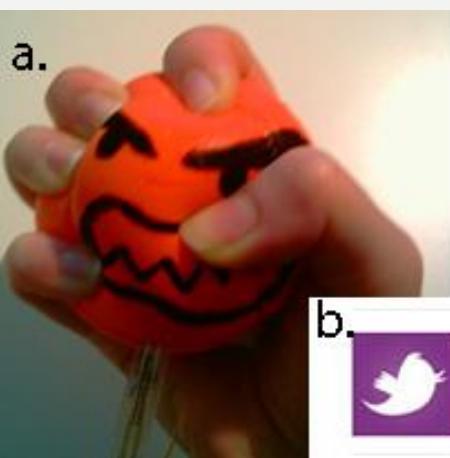

List of available nodes

## AngryBall

- Ball to let out once anger and inform friends
- FSR-sensor inside
- Connected to Arduino which is linked to Sourcebinder

- When the AngryBall is squeezed (a.), a twitter message is automatically send via API(b.)

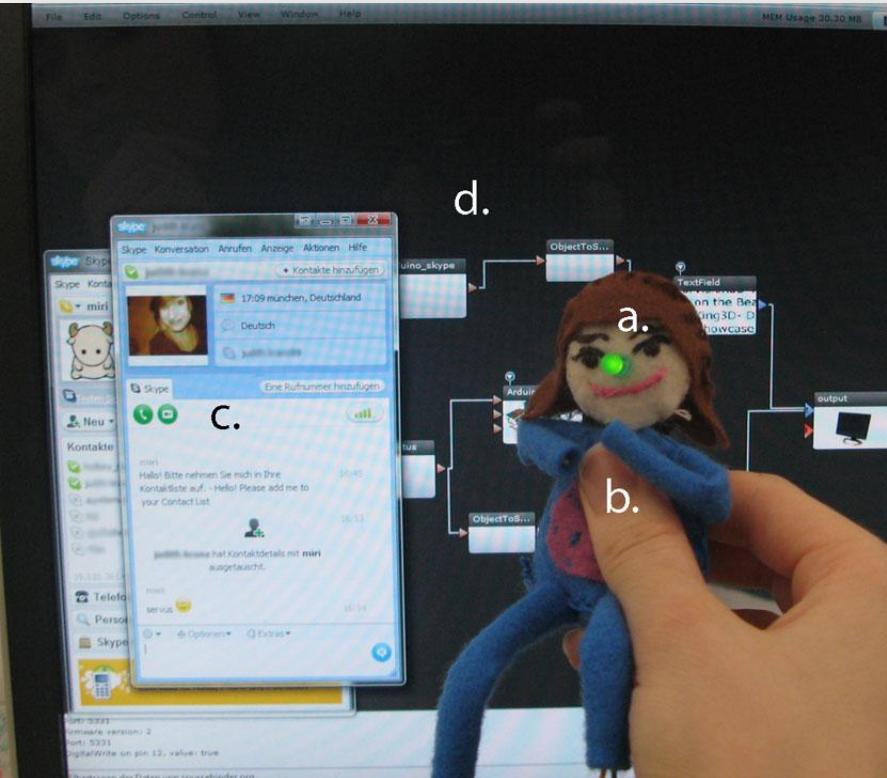

## BestFriends

- Puppets made of felt representing the users best friends
- FSR-sensor inside
- Green LED as noses
- Connected to Skype API

## BestFriends

- The nose of the puppet lights up (a.) when the friend is online in Skype
- If the puppet (b.) is pressed a Skype-chat-window opens (c.)
- The corresponding sourcebinder composition is visible in the background (d.)

## Code-structure of a node:

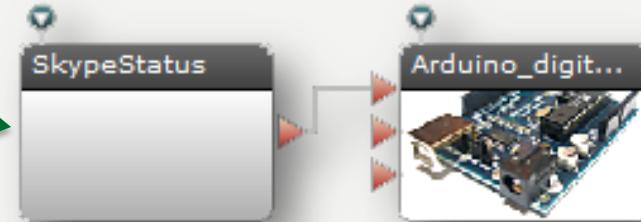

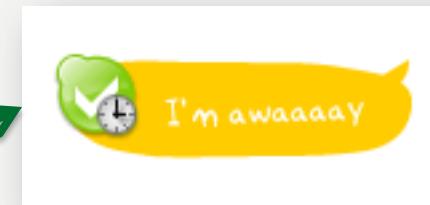

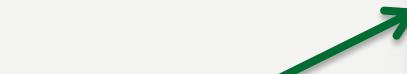

```
import org.visualminds.sourcebinder.NodeBase;

public class testNode extends NodeBase → Base-class for every node-definition
{
    override public function init():void{
        → Defines startup functionality
    }
    override public function update():void{
        → Match node output with updated values
    }
    override public function dispose():void{
        → Cleans up references for the node's instance
    }
    override public function pause():void{
        → Called when composition is paused/restarted
    }
    override public function restart():void{
    }
}
```

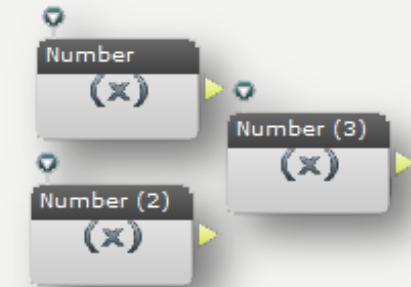

## Developed nodes:

- Twitter [8]
  - TwitterField
  - AngryBall
- lastFM [9]
  - lastFMField
- Skype [10]
  - SkypeField
  - SkypeStatus
  - BestFriends

- Based on ‘cognitive dimensions’ framework [11]:
  - Consistency:
    - Many inconsistencies because of community-based nature
  - Error-proneness:
    - Syntax errors quasi nonexistent
    - Sourcebinder avoids errors caused by wrong connections
    - Many and unclear error-messages when developing own nodes
  - Role expressiveness:
    - Names and sometimes images on nodes
    - No possibility to give nodes a ‘local’ names

# Evaluation

Miriam Kranz  
kranzm@cip.ifii.lmu.de

- Secondary notations:
  - Quasi no possibilities for secondary notations
- Other Problems:
  - Establish connection between Sourcebinder and Arduino is problematic
  - Not enough tutorials
  - Solid programming skills needed to create own nodes
  - Possibilities in domain of prototyping PIs still limited

The image shows two windows illustrating the communication setup. The top window is the Arduino IDE with the title "StandardFirmata | Arduino 0018". It displays the code for "StandardFirmata" which includes analog input declarations. The bottom window is a terminal window titled "D:\Dokumente\Uni\ws0910\projektarbeit\sourcebinder\Serproxy-0.1.3-3\serproxy.exe". The terminal output shows the application waiting for clients and a command being issued to start a FlashPolicy daemon.

1. StandardFirmata | Arduino 0018

```
File Edit Sketch Tools Help
StandardFirmata
* GLOBAL VARIABLES
=====
/* analog inputs */
int analogInputsToReport = 0; // bitwise array to
```

2. D:\Dokumente\Uni\ws0910\projektarbeit\sourcebinder\Serproxy-0.1.3-3\serproxy.exe

```
3.

C:\Users\Public\Documents\flashpolicyd_v0.6\Standalone>perl flashpolicyd.pl --file=flashpolicy.xml
Listening on port 843
```

# Conclusion

Miriam Kranz  
kranzm@cip.ifi.lmu.de

- Summary:
  - Sourcebinder can be used to create PIs but possibilities in this domain are limited
  - Evaluation showed that Sourcebinder still has room for improvement
- Future work:
  - More tutorials
  - Clearer error messages
  - Add possibility to annotate and comment nodes
  - Ameliorate Arduino-nodes
  - Develop further nodes that allow prototyping of PIs
