Abstract— Sum up your work and the ideas behind it in 150 to 250 words.

Index Terms—Fill, In, Your, Own, Keywords

1 INTRODUCTION

This is where your introductory text starts. As this should be a scientific publications, do not forget to cite other scientific papers to justify your argumentation. You might mention the work of Cooper et al. [1], a paper on the effects of 2D geometric transformation on visual memory [2]. If LaTeX displays only question marks [**IWonderIfThisSourceExists2013**] and shows warnings, re-run the build process. If that does not fix it, check your source name for typos. References to web pages should be placed in footnotes¹. It is sufficient if the access date is only mentioned for the first link as shown before.

2 OVERVIEW

2.1 Subsection 1 of Overview

- 2.1.1 Subsubsection 1 of Subsection 1
- 2.1.2 Subsubsection 2 of Subsection 1

2.2 Subsection 2 of Overview

This is how you do a list in LaTeX:

- First list item
- Second list item
- Third list item

4 SECOND SECTION

4.1 And another subsection

Here is what a table looks like. And do not forget to ref it as table (*see table 1*). Again, if the number of the table does not show up in the text re-run the build process and check your ref.

Here is a sample illustration. Again, do not forget to mention it somewhere in your text (*see figure 1*).

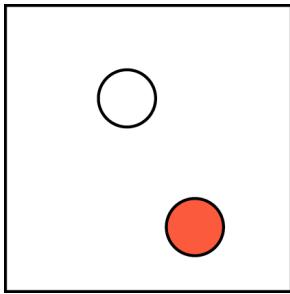

Figure 1. Sample illustration.

5 ANOTHER SECTION

6 AND YET ANOTHER SECTION

7 CONCLUSION

Here is room to sum up your paper and provide an outlook on future developments.
